Linked Orders Enhancements

Introduction

When a Sales Order is linked to a Purchase Order it provides the ability to automatically ship the Sales Order when the Purchase Order is received. However, when changes need to be made to either order, the link between them can be broken or the change requires manual updates to the database.

This enhancement will provide the ability to change the following on linked drop ship orders without breaking the link:

- Quantity
- Required Date
- Comments
- Receipt Quantity errors (prior to Order Entry Billing)

Linked Orders Enhancements

Objective

Perform the following enhancements to improve the processing of linked orders:

1. Create a new linked order list page with the following functionality:
 - a. Add 'Open Linked Orders' option to the Customer and Vendor portal.
 - b. Displays only open Sales Orders linked to Purchase Orders.
 - c. Based on the status of the Sales Order and Purchase Order, allow the user to change the Quantity Ordered, Required Date and comments.
 - d. Log all quantity and date changes as an Internal (INT) document comment on the Sales Order.
 - e. Allow the user to adjust the Quantity Received on drop shipped order receipts that have not been selected for Billing.
2. When a linked Sales Order is created, copy the following from the Sales Order to the Purchase Order:
 - a. PO document comments.
 - b. Reference Number.
3. Use the following columns on Purchase Order Detail to log changes to the Quantity Ordered, Required Date or comments:
 - c. PDLADT [Last Activity Date]
 - d. PDLATY [Last Activity Type]
 - e. PDOOQT [Original Order Quantity]
4. Enhance the EIP Billing->Select Update page to display the PO Freight amount and allow the user to update both the Freight and Special Charge.

Linked Orders Enhancements

Scope

This project will be designed and delivered with the following release and version levels:

HarrisData HD5.0 115166
IBM i V7R1M0

This project will be based on the HTML User Interface. The Legacy User Interface will continue to work as it does today.

Minor changes may be made to the design as the enhancement is coded. These changes are made to correct issues discovered in developing the enhancement that were not found during the design. If any changes are made they will be included in the copy of the design you receive with the final product delivery. This design will also serve as your documentation until the User Documentation is updated.

Linked Orders Enhancements

Programming Requirements

Open Linked Orders

The new Open Linked Order page (Figure 1) can be accessed from either the Customer or Vendor portals and has the following functionality:

- The list uses the new Open Linked Orders View 01 (OEORDTV01). Refer to the Database Requirements section for a complete list of all columns available.
- The default list provides the following standard column links:
 - Bill-To Name -> Customer Select
 - Ship-To Name -> Customer Select
 - Sales Order – Sales Order Inquiry
 - Item Number – Item Select
 - Item Description -> Item/Whs Select
 - Vendor Name – Vendor Select
 - PO Number – Purchase Order Inquiry
- The 'Update' icon  in the Opt column is a link to the Linked Order Maintenance page (Figure 2) and will only display if all of the following are true.
 - The user has 'Update' program option security for program HOELOM_W. Refer to the Program Option Security section.
 - The Purchase Order is being drop shipped directly to the customer.
 - The Drop Ship Quantity Received is zero.

Linked Orders Enhancements

- Drop Ship Quantity Received
 - This will be a link to adjust the quantity received if:
 - The user has 'Receipt Adjustment' program option security for program 'HOELOM_W'. Refer to the Program Option Security section.
 - The Sales Order has not been selected for Billing.
 - The Purchase Order is being drop shipped, which means inventory is not updated. For orders that are not drop shipped, corrections must still be done using the legacy Purchasing->Receipt Adjustments.
 - When the link is selected, the Linked Order Maintenance page (Figure 6) will be displayed.
 - Note: If there is a partial first receipt that is selected for Billing and then a second receipt is entered, only the quantity received on the second receipt can be adjusted.

Figure 1

Linked Orders Enhancements

Linked Order Maintenance

The Linked Order Maintenance page (Figure 2) allows the user to update the Quantity Ordered, Required Date and Comments for linked drop ship orders and provides the following functionality:

- If any of the following are True, an error message will display and the 'Accept' icon  will not be available:
 - Sales Order is busy (Figure 4)
 - Purchase Order is busy (Figure 4)
 - Purchase Order has been printed and the 'allowUpdLinkedPOPrinted' flag in EIP Configuration->BaseFormat.icl is set to 'N' (Figure 5). Refer to the EIP Configuration section for additional information.
- If the Quantity Ordered or Required Date are changed, the following will occur:
 - Update the Quantity Ordered and Required Date to:
 - Sales Order Detail (OEORDT)-> Quantity Ordered (ODQORD) and Required Date (ODRQDT)
 - Item/Whs (HDIWHS)->Drop Ship Quantity Ordered
 - Purchase Order Detail (POPOMD)->Quantity Order (PDQTOR) and Required Date (PDRQDT)
 - If the Purchase Order has not been 'Printed' or the 'logUpdLinkedPONotPrinted' flag in EIP Configuration->BaseFormat.icl is set to 'Y', add an Internal (INT) document comment to both the Sales Order and Purchase Order for each value that was changed (Figure 3).
- For each of the Comment boxes (Item, Header or Trailer) that are changed, both the Sales Order and Purchase Order comments will be updated. Be sure to select the appropriate 'Append' or 'Replace' per Item, Header and Trailer comments.
 - If 'Append' is selected, all of the comments in the text box will be appended to the end of the existing comments. So to avoid duplicate comments, clear the text box and enter the new comments to be. If you would like a blank line between the existing comments and the new comments, be sure to add the blank line at the top.
 - If 'Replace' is selected, all existing 'PO' document comments will be deleted and replaced with what is entered in the text box.

Linked Orders Enhancements

- If the Quantity Ordered, Required Date or Comments are changed, the Last Activity columns will be updated.
 - Last Activity Type (POPOMD/PDLATY) will be set to the first code that applies:
 - Q3 – Quantity, Date & Comments Changed
 - QD – Quantity Ordered & Required Date Changed
 - QC – Quantity Ordered & Comments Changed
 - DC – Required Date & Comments Changed
 - QT – Quantity Ordered Changed
 - DT – Required Date Changed
 - CM – Comments Changed
 - Last Activity Date (POPOMD/ PDLADT) will be set to the current date.
 - Original Order Quantity (POPOMD/PDOOQT) will only be set if both are true:
 - Quantity Ordered is changed
 - Original Order Quantity is zero.

Figure 5

Linked Orders Enhancements

When the Drop Ship Quantity Received link on the Open Linked Orders list (Figure 1) is selected, the Linked Order Maintenance page (Figure 6) is displayed with the following functionality:

- The only value that can be maintained is the Quantity Received.
- Any change to Quantity Received will update:
 - Order Detail Quantity Shipped This Cycle (OEORDT/ODQSTC)
 - Order In Process Quantity Shipped This Cycle (OEORDP/IDQSTC)
 - Purchase Order Detail Quantity Received (POPOMD/PDQRST)
 - Item/Warehouse (HDIWHS)
 - Reserved (IWRESQ)
 - In Transit (IWQTRS)
 - Drop Shipped (IWDSQO)
 - YTD Received (IWQRYT)

If the Quantity Received is changed to zero, the Order in Process Header and Detail will be deleted and the Purchase Order Header and Detail status will be open.

Billing Select Update

The EIP Fulfillment->Billing->Select Update page will be enhanced as follows:

- If the O/E Control->Allow P/O Generation flag is set to 'A' or 'P', display additional columns. The values displayed will come from the new Order Entry Linked In Process Freight table (OELIPF) which is updated when a linked drop ship is received.
 - PO Number – links to the PO Inquiry
 - PO Freight – links to the Update Freight/Special Charge (Figure 8). If the PO Freight doesn't equal the Sales Order Freight, highlight the **PO Freight** amount.

After all changes are made to the Freight/Special Charge amounts, the Edit List should be re-run by selecting the Batch Number link for 'Click here to re-run Edit List'.
